

Precor AMT 885 Adapt. MotionTrainer

P82 - open stride, Black Pearl

The award-winning and innovative design of the Adaptive Motion Trainer (AMT®) 885, complete with the P82 touch screen console, intuitively responds to users' natural motion, allowing users to completely change the flow of movements for a comprehensive cardio workout - all without so much as the push of a button.

Features

Adaptive Motion with Open Stride™

Open Stride™ is a unique feature that allows exercisers to adjust their stride height from 6.8 to 10 inches (17 to 25 cm) and change stride length at will from zero to 36 inches (0 to 91 cm), providing an infinite range of stride paths to engage several muscle groups.

A Versatile Cardio Workout

With a combination of climbing, walking and running movements, moving handle bars and dual action movements between the arms and legs, the AMT® 885 allows users to focus on different muscle groups for a total body workout. With a combination of climbing, walking and running movements, moving handle bars and dual action movements between the arms and legs, the AMT® 885 allows users to focus on different muscle groups for a total body workout.
