

Eleiko Cable Connector Bar

- ✓ Quality Construction
- ✓ Eleiko Knurling
- ✓ 30 mm Grip Diameter

The Eleiko Cable Connector Bar measures 1070 mm in length and 30 mm in diameter and weighs 2.7 kg. Designed for use with the Prester Cable Attachment, the connector bar can be attached to one weight stack from the middle connecting point for lat pull downs, or used in a dual stack configuration where the cables are connected to each end of the bar allowing you to use both weight stacks for a max 120 kg pulling resistance.

Features

Optimal Uses

In a single stack set up, the Cable Connector Bar is great for lat pull downs. It is also designed to gain access to twice the resistance in dual stack configuration increasing the max pulling resistance to 120 kg / 265 lb when both stacks are in use. For further variations, other handles, such as a row handle, can be attached centrally to the connector bar.

Distinctive Details

The Cable Connector Handle is crafted from steel tubing striking the right balance between weight and sturdy construction. It features signature Eleiko knurling for a secure grip. Attachment points at the center of the handle and at end make the handle versatile for training in both single and dual stack configurations.

Made in Sweden

Made in Halmstad, quality materials and construction deliver the Eleiko feeling and a great training experience.
