IPF Powerlifting Competition Platform

Charcoal

- ✓ **IPF competition-certified**
- ✓ **Rubber dampening tiles**
- ✓ **Textile surface for optimal grip**
- ✓ **More robust 60mm height**

Upgrade your powerlifting experience with the Eleiko Powerlifting Competition Platform, featuring an updated textile surface and expanded platform protection under the plate storage area for unparalleled safety and performance. The protected plate storage ensures a level surface, improving loader efficiency and reducing trip hazards for better performance in training and competition environments.

Features

Durable construction

Sturdy metal frames, sound and vibration-dampening rubber tiles, and highly textured engineered fabric stretched across a joint-free tile's surface ensure optimal grip and platform performance in all conditions.

Platform Grip

The upgraded textile surface features a pile that combines stiff and soft fibres, a highly durable surface with superior grip and traction.

Plate Storage Platform

The plate storage platform areas ads protection for equipment and floors while improving loader efficiency and safety as they can move weights from the storage rack to the bar without navigating a height change.

Customization

Customize the plate storage platform areas with competition or facility branding for a bespoke platform design.
